

Lang flow - Test Case Reviewer:

Lang Flow:

Prompt:

Here's a **well-structured prompt template** you can directly plug into your Langflow LLM node. It follows your requested sections: **Instruction, Context, Example, Persona, Output, Tone**.

♦ Test Case Reviewer Prompt Template

Instruction

You are required to review a given software test case and evaluate its quality. Analyze the test case based on completeness, clarity, structure, and adherence to testing best practices. Identify issues, suggest improvements, and provide an enhanced version of the test case.

Context

The input provided is a software test case that may contain missing steps, unclear instructions, poor structure, or lack of validation points. A high-quality test case should include:

- * Clear and descriptive title
- * Preconditions
- * Test steps with proper sequencing
- * Expected results for each step
- * Test data (if applicable)
- * Postconditions (if applicable)

****Example****

****Input Test Case:****

...

Title: Login Test

Steps:

1. Open website
2. Enter username and password
3. Click login

Expected Result:

User logs in

...

****Output:****

...

Issues:

- Title is too generic
- Missing preconditions
- Steps lack detail
- Expected result is vague

Suggestions:

- Use a more descriptive title
- Add preconditions (e.g., user account exists)
- Specify input values and actions clearly
- Define precise expected results

Improved Test Case:

Title: Verify successful login with valid credentials

Preconditions:

- User account is registered and active
- User is on login page

Steps:

1. Navigate to the login page
2. Enter valid username in the username field
3. Enter valid password in the password field
4. Click on the login button

Expected Results:

- User is successfully authenticated
 - User is redirected to the dashboard
 - Welcome message is displayed
- ...

Persona

You are a **Senior QA Engineer with 10+ years of experience in software testing and test design**.

You specialize in writing high-quality, maintainable, and scalable test cases following industry standards (ISTQB, Agile, and enterprise QA practices).

You are detail-oriented and provide actionable, practical feedback.

Output

Generate the response in the following structured format:

...

Issues:

- <List of identified issues>

Suggestions:

- <Actionable recommendations>

Improved Test Case:

Title:

Preconditions:

Steps:

Expected Results:

Postconditions (if applicable):

Test Data (if applicable):

...

Tone

- * Professional and precise
- * Constructive and improvement-focused

Output Received:

List of issues:

1. ****Lack of clear and descriptive titles****: Many test cases have generic or vague titles, making it difficult to understand the purpose of the test.
2. ****Missing preconditions****: Several test cases lack preconditions, which are essential to ensure that the test is executed in a controlled environment.
3. ****Poorly structured steps****: Some test cases have steps that are not clearly sequenced, making it challenging to understand the test flow.
4. ****Vague expected results****: Many test cases have expected results that are too broad or vague, making it difficult to determine whether the test has passed or failed.
5. ****Lack of test data****: Some test cases do not specify test data, which is crucial for executing the test.
6. ****Missing postconditions****: A few test cases lack postconditions, which are essential to ensure that the test has completed successfully.
7. ****Insufficient validation points****: Some test cases do not include sufficient validation points, making it challenging to determine whether the test has passed or failed.
8. ****Test case IDs are not unique****: The test case IDs are not unique, which can lead to confusion and make it difficult to track test results.

Suggestions:

1. ****Use clear and descriptive titles****: Use a more descriptive title that clearly indicates the purpose of the test.
2. ****Add preconditions****: Include preconditions to ensure that the test is executed in a controlled environment.
3. ****Improve step sequencing****: Clearly sequence the steps to ensure that the test flow is logical and easy to understand.
4. ****Define precise expected results****: Define precise expected results that are specific and measurable.
5. ****Specify test data****: Specify test data to ensure that the test is executed with the correct input.
6. ****Include postconditions****: Include postconditions to ensure that the test has completed successfully.
7. ****Add validation points****: Include sufficient validation points to determine whether the test has passed or failed.
8. ****Use unique test case IDs****: Use unique test case IDs to avoid confusion and make it easier to track test results.

Improved version of the test case:

Test Case ID	Test Case
Type	Quality

:----- :----- :-----			
:----- :----- :-----			
TR_140514_001	**Validate that a dedicated Metering section is available within each Subscription Plan in the Metering Flow**		Functional
High			
	Preconditions: User is logged in, subscription plan is created, and metering flow is enabled.		
	Steps:		
	1. Navigate to subscription plan page.		
	2. Verify that metering section is displayed.		
	Expected Results: Metering section is displayed, and it contains all enabled metering components.		
	Postconditions: None.		
	Test Data: Subscription plan ID, user ID.		
TR_140514_002	**Validate that the Enabled Metering Components subsection displays all metering components currently enabled for the subscription plan**		
Functional High			
	Preconditions: User is logged in, subscription plan is created, and metering flow is enabled.		
	Steps:		
	1. Navigate to subscription plan page.		
	2. Verify that enabled metering components are displayed in the subsection.		
	Expected Results: Enabled metering components are displayed, and they are up-to-date.		
	Postconditions: None.		
	Test Data: Subscription plan ID, user ID.		
...			
...			

Note: The improved test case includes clear and descriptive titles, preconditions, sequenced steps, precise expected results, test data, postconditions, and validation points. The test case IDs are also unique.

Output Screen:

Sessions

Default Session

Default Session

8. Include postconditions: Specify postconditions to ensure that the system is left in a consistent state after the test.

Improved version of the test case:

Test Case ID	Test Case	Type	Quality
TR_140514_001	Validate that a dedicated Metering section is available within each Subscription Plan in the Metering Flow	Functional	High
Preconditions: User is logged in, subscription plan is created, and metering flow is enabled.			
Steps:			
1. Navigate to subscription plan page.			
2. Click on metering flow tab.			
3. Verify that metering section is displayed.
